## DETAILED ACTION

### *Election/Restrictions*

1. Claim 89 is generic and allowable. The restriction requirement among the species, as set forth in the Office action mailed on February 21, 2006, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claims 91-104, 110-115, 119-167, 170-183, and 187 are directed to non-elected species no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim.
2. In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
3. Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

### *Allowable Subject Matter*

4. Claims 89-167, 170-183, 185-190 are allowed.
5. The following is an examiner's statement of reasons for allowance:

With respect to claim 89, the prior art reference, in particular Van Der Knaap fails to disclose a vehicle suspension system for vehicle comprising: a body having a pitch center, a roll center, and a reaction center, the body so as to allow one of the pitch center, roll center and pitch and roll center, such center being located a elevation above the reaction center, to move in the direction of the forces that are imposed on the vehicle, thereby to preclude the applicable roll center, pitch center, or pitch and roll center from serving as the reaction center of the vehicle; (c) a second interconnecting system for interconnecting the tie structure(s) and the body about the pitch center or the roll center, both centers being located at elevations above the reaction center of the vehicle, whereby upon forces in pitch or roll being imposed on the vehicle during operation of the vehicle, the body rotates around the center(s) of rotation relative to the tie structure, in the direction opposite to the direction of the forces acting on the vehicle in pitch or roll; and (d) a load control system for generating a resistance to the movement of the pitch or roll center(s) which is greater than the resistance generated by the load control system to the movement of the center of gravity of the vehicle due to forces applied to the vehicle during operation of the vehicle.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
